

## ComplianceWorkstation

Our ComplianceWorkstation offers a single view of all primary market activity, from our DealMonitor application. This spans across all supported activities from Portfolio Managers placing internal aggregations of orders, to Traders consolidating & submitting external orders to brokers. This gives your company a transparent view of all your primary operations.

Currently the primary issuance workflow to many buy-side firms, requires monitoring via multiple channels. Our DealMonitor platform offers a consolidated place for primary issuance, with a direct link to the sell-side brokers you have trading lines with. With your colleagues in one place, the ComplianceWorkstation can see every message/deal detail/trade/allocation within one place, and easily extract the information via API for downstream consumption. This gives companies the control and transparency to oversee operations, without slowing the fast-paced environment that is the Primary Markets.

### KEY STATS

**95%**

**EMEA Primary market ran over DealMonitor**

**80%**

**APAC Primary market ran over DealMonitor**
