Hosted Risk Service

Increasing sophistication for measuring counterparty credit risk continues to permeate the Financial Services Industry. Methods such as CVA, which started at tier one banks, has now reached smaller sell-side and the buy-side institutions mandated through heightened accounting requirements and capital regulation.

The Hosted Risk Service, by IHS Markit, combines our award-winning risk engine with our best-in-class CDS and derivative market data to provide a fully hosted and simple to use service for the periodic calculation of valuation adjustments and regulatory capital.

Consistent with global regulatory requirements

Meet the increasing demands from accounting fair value requirements (CVA/DVA) and regulatory capital (SA-CCR, BA-CVA) in a cost-effective manner.

Rapid deployment

Shorten a six month or longer onboarding time with deployed systems to as little as a month without any IT infrastructure impact.

Regulatory future-proofed

Our solution is updated when regulation changes so you can minimise the burden of responding to change.

Benefit from trusted data, analytics and expertise

We have decades of experience on all the ingredients of the CVA calculation from CDS curves to proxying to pricing methodology.

Reduce TCO

Significantly reduce Total Cost of Ownership (TCO) execution costs by leveraging our platform's turnkey capabilities and proven project acceleration track-record without sacrificing flexibility. Managed by our team of technology and subject matter experts, we can free up your internal resources so you can focus on business priorities.
