Monthly Performance Recap

US:

Within the US Large Cap universe the Deep Value model had the strongest one month decile return spread performance, returning 13.56%, while the Price Momentum model lagged. Over the US Small Cap universe, our Deep Value model had the strongest one month decile return spread performance, returning 10.89%, while the Price Momentum model lagged.

Developed Europe:

Over the Developed Europe universe, our Deep Value model returned 6.35% on a one month decile return spread basis, while Price Momentum lagged.

Developed Pacific:

Over the Developed Pacific universe, the Value Momentum model had the strongest one month decile return spread performance, returning 9.26%, while the Price Momentum model lagged. The Relative Value model's one year cumulative performance is currently 7.91%.

Emerging Markets:

Within the Emerging Markets universe, our Value Momentum model returned 2.79% on one month quintile return spread basis, while Price Momentum lagged. The Earnings Momentum model's one year cumulative performance is still the highest for the EM universe at 7.56%.

Sector Rotation:

The US Large Cap Sector Rotation model returned -2.50%. The Tech sector had a favorable ranking and the Energy sector had an unfavorable ranking. The US Small Cap Sector Rotation model struggled with a return of -0.60%. The Cyclical sector had a favorable ranking and the Energy sector had an unfavorable ranking. The Developed Europe Sector Rotation model struggled during the month. The Financials sector had a favorable ranking and the Telecom sector had an unfavorable ranking.

Specialty Models:

Within our specialty model library the Technology model had the strongest one month quintile return spread performance returning 14.35%, while the Bank and Thrift 2 and the Semiconductor models struggled. The Insurance model's one year cumulative performance is the highest at 21.25% while the Retail model's performance is the lowest at -28.89%.

IHS Markit Model Matrix

	Deep Value	Earnings Momentum	Price Momentum	Relative Value	Value Momentum

US Small Cap⁽¹⁾

Over the US Small Cap universe, our Deep Value model had the strongest one month decile return spread performance, returning 10.89%, while the Price Momentum model lagged.

The US Small Cap Sector Rotation model struggled with a return of -0.60%. The Cyclical sector had a favorable ranking and the Energy sector had an unfavorable ranking.

Model ⁽²⁾	Decile Return Spread ⁽³⁾			D1 Excess Return ⁽³⁾			D10 Excess Return ⁽³⁾			Information Coefficient ⁽³⁾

 (3) Performance metrics calculations available in Appendix 1.3

Canada 500⁽¹⁾

Over the Canadian universe, our Deep Value model was the best performing model with one month quintile return spread performance of 7.17%, while Price Momentum underperformed. The TTM Operating Cash Flow-to-Price factor within the Deep Value model had a one month quintile return spread of 6.19% and was the largest contributor to the model's performance in March.

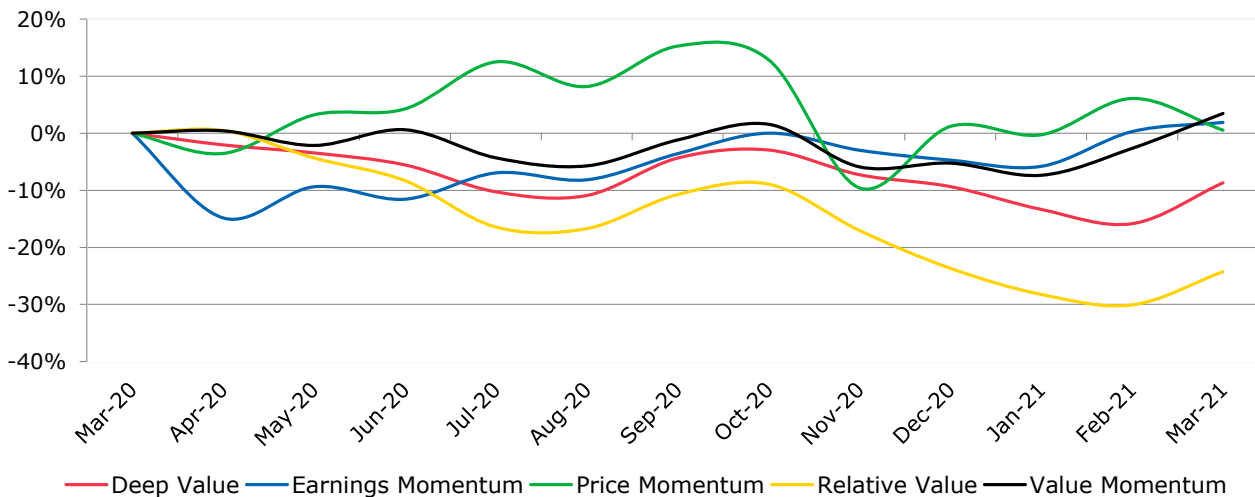

Model ⁽²⁾	Quintile Return Spread ⁽³⁾			Q1 Excess Return ⁽³⁾			Q5 Excess Return ⁽³⁾			Information Coefficient ⁽³⁾		
	1mo	3mo	12mo	1mo	3mo	12mo	1mo	3mo	12mo	1mo	3mo	12mo

 (2) Model descriptions available in Appendix 1.2
 (3) Performance metrics calculations available in Appendix 1.3

Japan 2000⁽¹⁾

Within the Japan universe our Deep Value model had the strongest one month decile return spread performance returning 8.27%, while Price Momentum lagged.

The Price Momentum model was the most improved during the month on a one month decile spread basis improving by 6.59% over its performance in February.

Model ⁽²⁾	Decile Return Spread ⁽³⁾			D1 Excess Return ⁽³⁾			D10 Excess Return ⁽³⁾			Information Coefficient ⁽³⁾		
	1mo	3mo	12mo	1mo	3mo	12mo	1mo	3mo	12mo	1mo	3mo	12mo

Developed Europe⁽¹⁾

Over the Developed Europe universe, our Deep Value model returned 6.35% on a one month decile return spread basis, while Price Momentum lagged.

The Developed Europe Sector Rotation model struggled during the month. The Financials sector had a favorable ranking and the Telecom sector had an unfavorable ranking.

Model ⁽²⁾	Decile Return Spread ⁽³⁾			D1 Excess Return ⁽³⁾			D10 Excess Return ⁽³⁾			Information Coefficient ⁽³⁾

Australia-New Zealand 250⁽¹⁾

The Earnings Momentum model had the strongest one month quintile return spread performance within the Australia-New Zealand universe returning 3.10%, while the Price Momentum model lagged.

The Street Revision Magnitude factor within the Earnings Momentum model had a one month quintile return spread of 5.64% and was the largest contributor to the model's performance in March.

Model ⁽²⁾	Quintile Return Spread ⁽³⁾			Q1 Excess Return ⁽³⁾			Q5 Excess Return ⁽³⁾			Information Coefficient ⁽³⁾

Frontier Markets⁽¹⁾

Over the Frontier Market's thematic models, the Price Momentum model had the strongest one month quintile return spread performance, returning 0.97% while the Relative Value model lagged.

The Relative Value model's one year cumulative performance has improved to 6.63%.

The 24-Month Residual Return Variance factor within the Price Momentum model, had a one month quintile return spread of 4.05% and was the largest contributor to the model's performance in March.

Model ⁽²⁾	Quintile Return Spread ⁽³⁾			Q1 Excess Return ⁽³⁾			Q5 Excess Return ⁽³⁾			Information Coefficient ⁽³⁾

Long/Short Return Performance

1 Year Cumulative Spread Returns (1-Month Holding Period)

(1) Universe construction methodology in Appendix 1.1
 (2) Model descriptions available in Appendix 1.2
 (3) Performance metrics calculations available in Appendix 1.3
 (4) Deciles are used for the Bank and Thrift 2 universe

APPENDIX

1.1 UNIVERSE DESCRIPTIONS

US Large Cap: Top 90% of US stocks by cumulative market-cap, including securities held by passively benchmarked ETF's tracking the same market segment.

US Small Cap: Securities in 91-98% of US stocks by cumulative market-cap, including securities held by passively benchmarked ETF's tracking the same market segment.

Canada 500: Top 500 Canada stocks by market-cap.

Japan 2000: Top 2000 Japan stocks by market-cap.

Australia - New Zealand 250: Top 250 stocks by market-cap in Australia and New Zealand.

Developed Europe: Top 1000 securities in the Developed Europe markets by market-cap.

Developed Pacific: Top 95% of stocks by cumulative free float market-cap among developed countries in the region, subject to a minimum free float market-cap of USD 250 mm.

Developed World Ex-North America (EAFE): Top 80% of stocks by cumulative market-cap stocks, in global developed countries excluding US/ Canada.

Emerging Markets: Top 95% of stocks by cumulative free float market-cap among emerging market countries, subject to a minimum free float market cap of USD 100 mm.

Frontier Markets: Top 95% of stocks by cumulative free float market-cap among frontier market countries, subject to a minimum free float market cap of USD 100 mm.

Bank and Thrift: All bank and thrift stocks that are part of the US Total Cap universe (top 98% of US stocks), with a share price > \$5 and market-cap >= .01% of the largest bank in the universe.

Insurance Universe: All insurance companies listed on US exchanges, excluding ADR's and Insurance brokers.

Oil & Gas: Global stocks in the oil & gas industry

REIT: All US REITs that are part of the US Total Cap universe (top 98% of US stocks), excluding mortgage REIT's.

Retail: All Retail companies in the US Total Cap universe (top 98% of US stocks), including those in the Cyclical and Non-Cyclical sectors.

Semiconductors: Global securities classified in the Semiconductor industry.

Technology: All Technology companies in the US Total Cap universe (top 98% of US stocks).

1.2 MODEL DESCRIPTIONS

The reported Decile 1 Excess Returns and Decile 10 Excess Returns are Cumulative Sum

Deep Value Model (DVM): seeks to identify securities trading at a steep discount to their intrinsic

Earnings Momentum Model (EMM): incorporates analyst forecasts alongside in conjunction with past earnings strength to estimate future earnings potential.

Price Momentum Model (PMM): seeks to combine price changes with several risk factors to provide a consistent short term investment signal.

Relative Value Model (RVM): an alternative approach to the DVM that considers valuation indicators on an industry adjusted basis thus mitigating any concentration risk.

Value Momentum Analyst (VMA): a comprehensive style model which includes factors from Value, Price and Earnings Momentum themes to identify attractive/ unattractive securities.

GARP Model (GARP): designed to identify attractively valued stocks using valuation techniques that take growth into consideration. The Valuation component selects stocks with attractive valuation characteristics.

Historical Growth Model (HGM): identifies stocks with an above-average track-record of earnings growth, strong sales growth and high sustainable growth. This blended approach enables our Historical Growth Model to not only identifies traditional growth stocks, but also value stocks on the verge of growth.

Small Cap Model: seeks to exploit the noticeable excess performance in the small cap arena. Constituent factors selected for its individual and orthogonal power within the small cap space.

Bank and Thrift II Model (QBM2): seeks to generate consistent outperformance by leveraging specialty data sources to create bank-and-thrift-specific factors which complement a set of broad factors exhibiting strong performance within the bank and thrift industries.

Insurance Model (QIM): provides a robust methodology to enhance stock selection processes by comparing the relative performance of insurance companies on a consistent valuation framework designed to identify stocks with significant alpha generating potential.

Oil and Gas Model (OGM): uses a comprehensive scoring system that systematically values companies utilizing energy specific operating metrics and fundamental factors relevant to the oil and gas industry.

Retail Model (QRT): designed to generate alpha by employing general factor signals alongside key retail specific measures. Retail specific indicators include Same Store Sales and Earnings Expectations.

REIT Model (QRM): incorporates detailed property level information such as occupancy rate, location, and building quality to construct a bottom up approach assessment of REIT Net Asset Value; along with several other metrics.

Technology Model (QTA2): a multidimensional approach of combining several industry-specific models with a cross-sectional overlay. The model seeks to generate alpha by accounting for the inherent cyclicity and volatility of sub-industries.

1.3 PERFORMANCE STATS CALCULATION

The reported Information Coefficient (correlation between model ranks and equity return) is the average over the given time period. The reported Decile 1 and Decile 10 Excess Returns are Cumulative Sum (CUMSUM) and are measured as the excess return of their respective benchmark over a given time period

The reported Decile 1 Excess Returns and Decile 10 Excess Returns are Cumulative Sum (CUSUM) returns and are measured as the excess return of their respective benchmark over the given time period.

The reported Long-Short Spread Returns are Cumulative SUM returns and are calculated by subtracting the total returns of stocks in the bottom decile/quintile from those in the top decile/quintile over the given time period.

Quintiles are used for performance stats calculations, instead of deciles, in cases of smaller universe sizes.

The reported performance stats are all in local currency.
