Monthly Performance Recap

US:

Within the US Large Cap universe, most models performed well. The Deep Value model had the strongest one month decile return spread performance, returning 4.96%.

The US Large Cap Sector Rotation model returned 1.90%. The Energy sector had a favorable ranking and the Utilities sector had an unfavorable ranking. Over the US Small Cap universe, almost all of our models had positive performance. The Small Cap model had the strongest one month decile return spread performance, returning 5.00%. On the 12-month basis, the GARP model's performs best at 42.16% while the performance of the Earnings Momentum model continues to lag.

Developed Europe:

Over the Developed Europe universe, our Relative Value model returned 0.08% on a one month decile return spread basis, while Earnings Momentum lagged. On a 12-month basis, the Deep Value model performs best, at 20.12% cumulative. The Developed Europe Sector Rotation model returned 1.60%. The Industrials sector had a favorable ranking and the Energy sector had an unfavorable ranking.

Developed Pacific:

Over the Developed Pacific universe, all models performed well. The Price Momentum model had the strongest one month decile return spread performance, returning 3.77%.

The Value Momentum model leads performance over the recent one year, delivering 24.16%.

Emerging Markets:

The Price Momentum model had the strongest one month quintile return spread performance, returning 3.34%.

The Value Momentum model continues to lead over the one-year period, with returns at 26.10%.

Sector Rotation:

The US Large Cap Sector Rotation model returned 1.90%. The Energy sector had a favorable ranking and the Utilities sector had an unfavorable ranking. The US Small Cap Sector Rotation model with a return of 1.70%. The Cyclical sector had a favorable ranking and the Telecom sector had an unfavorable ranking. The Developed Europe Sector Rotation model returned 1.60%. The Industrials sector had a favorable ranking and the Energy sector had an unfavorable ranking.

Specialty Models:

Within our specialty model library the Technology and the Retail models had the strongest one month quintile return spread performance returning 6.91% and 6.28%, respectively, while the Semiconductor and the REIT 2 models struggled.

The Retail model's one year cumulative performance is the highest at 39.72% while the REIT 2 model's performance is the lowest at -5.76%.

1.2 MODEL DESCRIPTIONS

Deep Value Model (DVM): seeks to identify securities trading at a steep discount to their intrinsic

Earnings Momentum Model (EMM): incorporates analyst forecasts alongside in conjunction with past earnings strength to estimate future earnings potential.

Price Momentum Model (PMM): seeks to combine price changes with several risk factors to provide a consistent short term investment signal.

Relative Value Model (RVM): an alternative approach to the DVM that considers valuation indicators on an industry adjusted basis thus mitigating any concentration risk.

Value Momentum Analyst (VMA): a comprehensive style model which includes factors from Value, Price and Earnings Momentum themes to identify attractive/ unattractive securities.

GARP Model (GARP): designed to identify attractively valued stocks using valuation techniques that take growth into consideration. The Valuation component selects stocks with attractive valuation characteristics.

Historical Growth Model (HGM): identifies stocks with an above-average track-record of earnings growth, strong sales growth and high sustainable growth. This blended approach enables our Historical Growth Model to not only identifies traditional growth stocks, but also value stocks on the verge of growth.

Small Cap Model: seeks to exploit the noticeable excess performance in the small cap arena. Constituent factors selected for its individual and orthogonal power within the small cap space.

Bank and Thrift II Model (QBM2): seeks to generate consistent outperformance by leveraging specialty data sources to create bank-and-thrift-specific factors which complement a set of broad factors exhibiting strong performance within the bank and thrift industries.

Insurance Model (QIM): provides a robust methodology to enhance stock selection processes by comparing the relative performance of insurance companies on a consistent valuation framework designed to identify stocks with significant alpha generating potential.

Oil and Gas Model (OGM): uses a comprehensive scoring system that systematically values companies utilizing energy specific operating metrics and fundamental factors relevant to the oil and gas industry.

Retail Model (QRT): designed to generate alpha by employing general factor signals alongside key retail specific measures. Retail specific indicators include Same Store Sales and Earnings Expectations.

REIT Model (QRM): incorporates detailed property level information such as occupancy rate, location, and building quality to construct a bottom up approach assessment of REIT Net Asset Value; along with several other metrics.

Technology Model (QTA2): a multidimensional approach of combining several industry-specific models with a cross-sectional overlay. The model seeks to generate alpha by accounting for the inherent cyclicity and volatility of sub-industries.

1.3 PERFORMANCE STATS CALCULATION

The reported Information Coefficient (correlation between model ranks and equity return) is the average over the given time period. The reported Decile 1 and Decile 10 Excess Returns are Cumulative Sum (CUMSUM) and are measured as the excess return of their respective benchmark over a given time period

The reported Decile 1 Excess Returns and Decile 10 Excess Returns are Cumulative Sum (CUSUM) returns and are measured as the excess return of their respective benchmark over the given time period.

The reported Long-Short Spread Returns are Cumulative SUM returns and are calculated by subtracting the total returns of stocks in the bottom decile/quintile from those in the top decile/quintile over the given time period.

Quintiles are used for performance stats calculations, instead of deciles, in cases of smaller universe sizes.

The reported performance stats are all in local currency.
