Easily and efficiently understand requirements relationships

Reduce research time substantially with instant access to a summary of or full contents of a referenced Code or Standard

Mitigate risk with reliable in-line references, eliminating the need to search in multiple areas, multiple times

Dynamic Linking at Work

Dynamic Linking is a powerful tool that allows technical professionals to quickly, easily, and confidently discover referenced knowledge within the extensive library of Engineering Workbench Codes and Standards. Using Artificial Intelligence, Dynamic Linking automatically generates over 35 million embedded industry to industry reference links across all Code and Standard documents from 400+ Standards Developing Organizations.

Using the capabilities of Dynamic Linking, technical professionals are able to:

- Easily and efficiently understand requirements relationships
- Reduce research time substantially with instant access to a summary of or full contents of a referenced Code or Standard
- Mitigate risk with reliable in-line references, eliminating the need to search in multiple areas, multiple times

Dynamic Linking by IHS Markit makes your engineering teams more efficient with the ability to quickly find interconnections between all Codes and Standards documents.

Mitigate risks and increase efficiencies by ensuring your teams are quickly identifying reliable references and understanding requirements relationships within the largest library of Codes and Standards documents.

“Being able to see the context of a reference within a standard efficiently will help engineers and others be more effective in their work.”
Dynamic Linking Capabilities

Instantly access a summary of or full contents of a referenced Code or Standard with in-line hyperlinks and hover functions.

"I am very excited about this feature! Not having to dig into all the branches reduces time to research by orders of magnitude. This would also reduce the tendency of most to not research as deeply as they should, which I presume happens often.”

Hover over one of the dynamic hyperlinks to instantly view publishing details and a summary pertaining to the Code or Standard

Click on the link to open a new window to display either the linked document or a summary of the document. Your subscription determines whether you can see the entire contents or a summary of the dynamically linked code or standard.
