

OneGOM Data Union

Introduction

OneGom (Data Union) is the result of client requests for carbon sequestration and exploration projects to bring together technical content elements of North American and International sources that are available from S&P Global Commodity Insights. This shows a singular view of available global content that organizations can use for further analysis and nearshore evaluation of deepwater Gulf of Mexico.

Benefit

Currently the unionized layer is of benefit to companies with an interest in the Gulf of Mexico from a technical perspective like Exploration and A&D, Operations, Finance Teams, and members of Government Agencies.

Data is presented to the user conveniently, without the need to open different screens and connection endpoints for different queries with access to more complete data (and these datasets are growing in number by the day!), in better resolution and with greater relevancy in a single set of views.

What is new?

As well as bring ease of use to clients we also bring new digital logs including metadata and catalog updates in newly curated views, new interpreted tops over multiple formations for CCUS analysis, and our first ever release of derived petrophysical analysis.

Data Updates

As the view is directly from the North America Application Data Model (ADM) and INTL ADM+, OneGom updates as both input systems updated.

OneGOM in action

Commodity Insights undertook a proof-of-concept project in the Gulf of Mexico. This enabled the identification of any

data enhancements and user requirements that would create a compelling capability.

The project was an early assessment of offshore saline aquifers in the Gulf of Mexico using our trusted geology and geophysics (G&G) datasets and seismic and engineering data in a Kingdom™ G&G project, along with Analytics Explorer. This represented the first time that commercially available modelling and analytics tools were used to conduct Carbon Capture, Utilization, and Storage (CCUS) research at this scale.

How is it delivered?

For user convenience Commodity Insights OneGOM Data Union is delivered by:

- Snowflake
- REST API
- Via Consultancy services

Where can I get more information?
