

# DebtDomain Datarooms

## DebtDomain Datarooms: a web-based system for securely and conveniently sharing confidential documents for any purpose

We are the leading debt platform used by top banks, leading corporations and investors.

DebtDomain Datarooms have been used on over 40,000 deals since 2002. We meet the stringent security, compliance and business continuity requirements of the world's leading institutions. Setting up a DebtDomain Dataroom to share and exchange sensitive information takes just minutes and is available for as long as necessary.

### Ease and efficiency

- Accessible anytime with a standard internet browser—no software or plugins required
- Overcome the size restrictions and security issues associated with emailing documents
- Documents and folders can be arranged offline and you can drag and drop from your desktop to the Dataroom, one at a time or in bulk, without any special software
- The Dataroom accepts uploads of all electronic data file types
- Third parties may upload documents for the site manager to receive
- DebtDomain has the largest community of arrangers, agents, lenders and investors, with more than 500,000 contacts and 25,000 firms—making linking parties easier

### Control, security and reliability

- Site manager sets permission to view folders or documents at the firm or contact level
- For additional security, apply document (pdf) watermarking or apply print or download restrictions
- Individual or group notifications can be sent whenever new documents are posted
- Post standard or custom confidentiality agreements and set public/private declarations
- Know who has accessed your documents—and when—with a full audit trail
- Data in transit is encrypted using TLS with RSA 2048 (encapsulating underlying High-Grade AE256bit encrypted session keys)
- DebtDomain has been building and deploying web-based systems for loan syndication since 2002
- Data within the database is encrypted using AES-128
- The application is subjected to yearly independent penetration tests, conducted by industry leading practitioners
- All web traffic is protected by AWS Shield Advanced and routed through AWS WAF

### Key stats

**6,000+**  
Datarooms

**Operating  
since 2002**
