

A day in the life of the “car of the future”

The automobile is on the precipice of change. New mobility trends such as ride-hailing and ride-**S**haring are changing business models. **C**onnectivity and **A**utonomous driving are creating a whole new world of possibilities for the vehicle travel experience. And **E**lectrified vehicles are beginning to challenge internal combustion engines. IHS Markit can help to create tangible action plans for customers facing challenging business decisions as they invest in one (or all) of the CASE segments.

250 million vehicles on the road globally will have over-the-air updates capabilities in 2025

50% of the global population in 2030 will live in an area where fully autonomous driving is legal

By 2031, nearly **7%** of all vehicle miles travelled globally could be via mobility services

61% of new vehicles sold globally in 2025 will offer connection bandwidths of 4G LTE or higher

About **1.25 million** of people died in road crashes globally in 2016*

*Association for Safe International Road Travel

In 2025, **17.6%** of global light duty vehicle production will feature plug-in capability*

*includes BEV and PHEV
