

ESG Reporting Repository

User controlled platform for the storage and dissemination of corporate environmental, social and governance (ESG) data and reports

Demand is growing for ESG information. Companies are spending an increasing amount of time completing multiple questionnaires, answering queries and determining what information is important to investors. While companies post ESG information on their website, third parties scrape this data with little ability for the company to receive feedback on the use of their data and correct any errors.

Equally, investors, financial institutions and other stakeholders are required to visit multiple websites to collect company data. This process is manual, inconsistent, onerous, error-prone and time consuming.

IHS Markit has revolutionized ESG data storage and dissemination by centralizing access and improving transparency. Our platform provides an efficient, single source of user managed ESG information.

Online registration

Simple registration process with the ability to easily add registered users

Document management

Upload data, reports and links with pre-defined document labels directly to the repository

Audit log and metrics

Activity tracking of registered users; access to metrics on company searches, previews and downloads

Exportable data

Downloadable documents; export capability via Excel, SFTP and API

User defined analysis

Raw data from reports is structured for benchmarking using Automation, Data Science and AI

Enhances transparency

Provides central source for ESG-related documents and data; offers insight into what stakeholders and markets want from disclosure

Increases efficiency

Reduces time and effort spent distributing or collecting ESG related data from various sources

Transforms data

Assembles advanced analytics from company-sourced data into easy to use formats, including some of the most widely known ESG reporting formats such as SASB and GRI

Drives participation

Simplifies the process for ESG financial disclosure dissemination to maximize participation, improve access to data and better assess ESG-related risk
